

IN THE DRAWINGS:

Please approve the drawing changes as shown in red on the attached marked-up copies of drawings 1A-8C. A Separate Letter to the Draftsman indicating the same proposed drawing changes is also enclosed.

IN THE CLAIMS:

Please enter the following amended claim 150:

C3  
1                    150. (Amended) A liquid crystal display device for controlling light  
2                    transmission by a birefringement effect of a liquid crystal which occurs when a voltage is  
3                    applied to the liquid crystal, comprising:  
4                    a first substrate and a second substrate for sandwiching a liquid crystal having  
5                    a negative dielectric constant anisotropy; and  
6                    domain regulating means for regulating azimuths of orientations of said liquid  
7                    crystal when a voltage is applied to said liquid crystal,  
8                    wherein when vertically seen to the substrates, said domain regulating means  
9                    including first line portions and second line portions, said first line portions being extended  
10                   in a first direction, said second line portions being extended in a second direction different  
11                   from said first direction, a plurality of said first line portions existing in one pixel, and  
12                   neighboring ones of said first line portions being arranged approximately parallel to each  
13                   other.
